ABSTRACT

Artificial Intelligence is rapidly transforming research across multiple scientific disciplines – and opinions on how to engage with it vary widely. This Jour Fixe is dedicated to an open discussion in our community on the impact that AI has on science and scientists.

Felix Joos (mathematics), David Maibach (physics) and Ullrich Köthe (computer science) will share brief insights into their personal, discipline-specific experiences with AI in research. Right after that, it is your turn to discuss questions like: How do you perceive the usage of AI in science? Which AI tools do you use? Which chances, risks and challenges do you see? Which structural changes are already happening or do you expect in your field?

We look forward to hearing your perspective and experience – whatever your stance on AI may be!

Upcoming talks in this semester's STRUCTURES Jour Fixe
